## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities:

Page 21 includes the claims. Claims should commence on a separate paper(s).

Appropriate correction is required.

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1 and 2 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 16 and 22 of U.S. Patent No. 6,181,707. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 16 and 22 of U.S. Patent Number 6,181,707 encompass the limitations of claims 1 and 2 of instant application. Moreover, omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art. It is well settled that the omission of an element and its functions is an obvious expedient if the remaining elements performs the same function

as before In re Karlson, 163 USPQ 184 (CCPA 1963). Also note Ex parte Rainu, 168 USPQ 375 (Bd. App. 1969).

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Christensen U.S. Patent Number 6,069,878.

Re Claims 1 and 2, fig. 16 teaches a common TDM Control Data Bus coupled to plurality of Matrix cards (See col. 14, lines 14-39) 30, 32 (a plurality of circuit modules) wherein each cards are connected to Key Panels (at least one peripheral station) via Serial Formatter & UART for interfacing Control Words & Audio data with the bus; fig. 17 teaches the detail of each cards and includes a TDM ASIC (a control data communication circuit) having a ports for transmitting and receiving Control & Audio data to and from the bus (receiver & transmitter) wherein the TDM ASIC function (See col. 15, lines 38-62) to assign unique time slots to inbound and outbound channels (assigned & designated time slots) wherein the slots can be assigned in a (See col. 16, lines 10-18) contiguous fashion (in success time slots) wherein the TDM ASIC in each cards uses mapping function (See col. 19, lines 10 +) to identify the source &

destination in accordance to the uniquely assigned time slots (a data identifying a unique address), in particular, when a client wants to intercom with another client card, the source card TDM ASIC sends a message via the back-plane Control bus to the Listener's Processors (each receiver) to make connection to a time slots to listen, hence, the mapping function within each TDM ASIC automatically identifies the source TDM ASIC based on mapping of the outbound and inbound time slot allocation on the TDM bus.
